EDUCATION

Stetson University
BA Philosophy

2014 – 2018
DeLand, FL

WORK EXPERIENCE

Lettuce Entertain You

Fullstack Web Developer

October 2023 – Present

Chicago, IL

- **Fullstack Development:** Build and maintain 50+ websites using Google Cloud Platform, Next.JS, React.JS, Typescript, JavaScript, PHP, WordPress, Tailwind, SASS, CSS, and HTML. In addition to the Frontend, Backend, and Infrastructure, I follow WCAG accessibility standards, a mobile-first design philosophy, security policies with Google Cloud Armor, and data tracking with Google Tag Manager and Analytics.
- **Project Management:** Brought restaurant websites from proposals to production, coordinating across marketing, design, and development teams to deliver polished products on time and within budget. Responsibilities included stakeholder management with restaurant operators, aligning technical solutions to business goals, resource planning, and establishing QA protocols for launch.
- **Cloud Infrastructure:** Deployed and configured GCP infrastructure with CI/CD pipelines and custom Docker configurations, utilizing Cloud Run, Load balancers, Bucket Storage, Cloud SQL Database, and Alert Monitoring. Troubleshooting system issues by analyzing error logs and implementing root cause diagnostics.
- **Reduced Development Time:** Saved over 200 developer hours annually by creating a custom PHP script that integrates the GCP CLI into the team's workflow, streamlining cloud asset transfers for 50+ websites. This solution reduced user errors compared to the previous third-party software and improved overall efficiency, allowing the team to focus on more critical tasks.
- **\$10k/year Cost Reduction:** Implemented CDN caching to solve performance issues and reduce database costs across our 50+ websites. The increased uptime led to additional revenue for the company and individual restaurants.

SKILLS

- **Programming Languages:** JavaScript, TypeScript, React.JS, Next.JS, PHP, Laravel, Wordpress, Python, Pandas, D3, Google Cloud Platform
- **French:** Cerfitifed B2 (University Level)

OPEN SOURCE PROJECTS

Electrify Chicago

Python, Pandas, D3, TypeScript, JavaScript, Vue.JS electrifychicago.net - 2025

Electrify Chicago is an independent open-source Chi Hack Night project looking to shed light onto one of the biggest sources of Chicago's CO2 emissions - buildings. I created a data analysis page of the year over year greenhouse gas emissions and other statistics for buildings across Chicago. I built on the existing Pandas data pipeline to calculate the citywide statistics and feed them into interactive D3 charts.
